

Silkies and Swirls – Equipment Needed

- Camera with appropriate lens: Lens selection depends on what you are photographing and your proximity to the subject.
- Tripod: A sturdy tripod is required for long-exposure images.
- Polarizing filter or polarizer: This kind of filter can be used to enhance contrast and reduce glare or atmospheric haze in landscape photography.
- Neutral density (ND) filter: ND filters come in fixed or variable versions; variable versions typically remove 3 to 10 stops of light.
- Shutter release: A remote control or attached cable will keep your camera steady.
- Clothing: Waterproof hiking boots are recommended. An extra pair of socks and boots come in handy if your boots leak.
